Course Overview

How to utilize the "All-on-X" protocol with conventional and nonconventional implants for rehabilitation of the edentulous ridge.

All on X" is the most rehabilitating treatment modality for most patients who are edentulous or soon to be edentulous.

This is a 1-day full scope course covering every aspect of treatment with respect to immediate loading.

The course will cover the latest protocols concerning osteotomy preparation utilizing osseodensification, autologous growth factors utilization derived from blood and dentin and prosthetic protocols.

The Course covers everything from diagnosis and treatment planning to surgical and prosthetic workflows. We even address some of the most complex and progressive protocols for managing potential complications.

Lectures

- ✓ Immediate Load Concepts Leading to Conventional AOX
- ✓ Prosthetic Considerations
- ✓ Pterygoid Implants: Indications, Surgical Technique, and Complications in All on x
- ✓ Case Presentations: from A to Z.
- ✓ Rehabilitation aspects and complications
- ✓ Hands on 3D models- All on 4 with classic implants
